

FOUNDRY

Best-in-Class Engineered Air Filtration Solutions

Summit's application expertise and advanced product technology addresses a foundry's complex indoor air quality needs. Guaranteed.

Summit solutions will ...

- Improve indoor air quality in areas with machining, material transport, metal melting, mixing, surface cleaning, welding, cutting, casting shakeout, and core making
- Reduce silica dust exposure
- Increase filter life and improve filter efficiency
- Reduce factory energy costs through clean air recirculation
- Improve plant safety by following OSHA requirements and NFPA standards
- Retrofit new system into existing air filtration equipment for improved efficiency and greater capacity
- Engineered and installed as a full turnkey solution at a competitive price

The Summit Advantage is Unparalleled

Custom Engineered Solutions

The Summit team thoroughly analyzes a facility for its unique complexities before designing any air filtration system. It's a project approach to ensure the right equipment and system processes are specified from the onset.

Superior Filtration Technology Expertise

From seasoned air filtration system engineers to industrial plant managers, the Summit team's experience is vast. It's why Summit has been entrusted with designing superior air filtration systems for small shops to Fortune 100 corporations.

Wide Selection of Best-in-Class Components

As a rep of the very best air filtration systems available, the Summit team has the resources to spec the best air filtration system components for your custom solution ... and support the system for years to come.
